

Kanga Exchange is a dynamically developing system of tools and FinTech services designed to encourage and facilitate widespread adoption of cryptocurrencies in everyday life. Kanga's fundamental field of operations is the cryptocurrency exchange which was launched in September 2018. Since then we have been steadily advancing – the package of services provided by Kanga has expanded to include such tools as a wallet for keeping your crypto assets, cryptocurrency exchange offices, a payment gateway, profitable Proof of Stake system, an IEO platform and much more.

KNG Token

KNG is a utility token used to pay the fees on transactions on Kanga exchange. All fees for services on the exchange are collected in the native KNG token, as this is the only form of payment accepted by Kanga.

Proof of Stake

The Proof-of-Stake (PoS) mechanism enables KNG token holders to share in the profits from transaction fees charged on the Kanga Exchange platform. Every holder can deposit KNG, oPLN, oEUR and USDT tokens to a dedicated PoS account and receive rewards in proportion to the staked amount.
